

# Product Environmental Footprint Manager

Build a credible catalogue of product environmental footprints – tailored to how your business works.

A configurable platform for print, packaging and apparel manufacturers to calculate, manage and share accurate product environmental footprints at scale.

## From one-off calculations to a scalable, audit-ready product footprint catalogue

Configurable to your business

Transparent calculation engine

Credible, client-ready outputs

### Built around your business

Configure units of measure, activity types, impact-factor categories and product families to match how you actually work.

### Transparent footprint engine

Every footprint is calculated from the ground up and recalculates automatically whenever an input changes.

### Audit-grade traceability

Every finalised footprint is frozen as a full snapshot, including bill of materials, factor source and year, so results can be reproduced and defended later.

### Model real manufacturing complexity

Support multi-site production, detailed transport modes and multi-supplier material blends under one product record.

### Credibility built into the workflow

Products move through an In Review to Published lifecycle, with CarbonQuota expert approval before a footprint goes live.

### Client-ready reports

Generate customer-specific Product Environmental Footprint reports, including transport to customer, in Word, Excel or PDF.

Curated impact-factor library

Cradle-to-factory-gate

Cradle-to-customer-gate

One-click exports
